

Hypertec conducts all business activities in accordance with applicable laws and regulations in the countries in which it operates, and the company maintains the highest ethical standards throughout these activities. As a company, we have a comprehensive approach in protecting our supply chain and are committed to providing solutions that our customers can trust.

As having a secure supply chain is the best and most effective method for preventing counterfeit parts from entering our manufacturing process, Hypertec has defined several controls across our supply chain. These controls are followed to avoid, detect, mitigate, and dispose of these counterfeit parts. The company wants to ensure that the required level of compliance with health and safety regulations is met, which is why we encourage our suppliers to enforce and follow protocols in accordance with international standards.

To minimise the risk of purchasing counterfeit parts, Hypertec expects its suppliers to perform constant security checks and to follow the established risk management processes. In the event that one of our suppliers believes they may have discovered counterfeit parts we strongly encourage them to inform us of such concerns. Additionally, we expect our suppliers, as well as each one of our employees, to participate in the implementation of Hypertec's Counterfeit Part Prevention Procedure and to comply with the system criteria specified in 48 CFR 252.246-7007, Contractor Counterfeit Electronic Part Detection and Avoidance System.
